No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
And 1919. Be located on chromosome 19 --Jackson, Bruns and Breslow, PNAS USA 81, 2945-2949 (1984) -- and is believed to be linked to the Apo C-II gene (see separate entry).

The two mutations causing type III hyperlipoproteinemia (apolipoprotein E phenotype E3/3) produces substitutions of Arg for Cys at amino acid II2 and Cys for Arg at amino acid position 142.

Draft entry and printed copy of sequence for [1] kindly provided by L.L. Gill, University of Aberdeen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     l6] sites, mutations resulting in type III hyperlipoproteinemia. Apo E is a component of normal human very low density lipoprotein. There are six human apo E phenotypes known to result from a single structural gene, three of the common alleles being epsilon-4. epsilon-3 and epsilon-2. This sequence appears to be of the epsilon-3 allele. [1] argues that the apo E polymorphism involves mutations in the structural coding region; for example the epsilon-2 phenotype which is characterized by hyperlipoproteinemia is thought to result from a c to t change (arg to cys) at base 586 below [3], [5]. The sequence shown is 57% homologous with human apo har and 81% homologous with rat apo E. For the epsilon-4 sequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5 (bases 577 to 624) (dill.L.L., Peoples.O.P., Pearston,D.H., Robertson,F.W., Humbhries,S.E., Cumming,A.M. and Hardman,N. Isolation and characterisation of a variant allele of the gene for human apolipoprotein E
                                                                                                                                                                                                                                                       apolipoprocein, apolipoprotein E; lipoprotein; polymorphism; very
low density lipoprotein.

The invention also relates to compositions and methods for haplotyping and/or genotyphing the APOE gene. The haplotyping methods of the invention are useful for improving the efficacy and reliability of several steps in the discovery and development of drugs for treating disceases associated with APOE activity, e.g. familial.

C adent for treating a specific condition or disease predicted to be associated with APOE activity and in the design of clinical trials of candidate drugs for treating a specific condition or disease predicted to be associated with APOE activity. Genotyping or haplotyping methods are useful to screen for compounds targeting APOE to treat a specific condition or disease predicted to be associated with APOE activity. Genotyping or haplotyping methods are useful to screen for compounds targeting APOE to treat a specific condition or disease associated with APOE activity. The present sequence condition or disease associated with APOE activity. The present sequence is a cDNA encoding human APOE protein. APOE gene is located on chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Genotyping human apolipoprotein gene of individual for determining haplotype of individual, involves determining identity of nucleotide pair at specific polymorphic sites for two copies of gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAGGTGGAGCAAGCGGTGGAGACCAGAGCCCGAGCTGCGCTGCGCCAGCAGACCGAGTGG 114

```
The encoded protein is used to treat subjects who are deficient in apolipoprotein-E (or who produce abnormal forms of this molecule) and therefore are likely to suffer from hyperlipidemia, resulting in arteriosclerosis. It can also be used to raise antisera for detecting the protein deficiency or production of abnormal forms. (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                           GluLysValGlnAlaAlaValGlyThrSerAlaAlaProValProSerAspAsnHis 299

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       594
                                                                                                                                                                                                                                                                          The invention relates to a new microarray which comprises probes for genes involved in psychoneuroendocrinimume (PNI) activity. The microarray is useful in diagnosing a condition associated with PNI activity, such as CFS, type-2 diabetes, allergic condition, inflammation, cancer and infection. The present sequence represents a psychoneuroendocrinimume gene expressed sequence tag. Note the specificatio mentions SEQ ID NO of up to 3314 but only sequences up to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       115 cagadecedecedeceregeaacregeacregeregerriregearracerececregere 174

```

The invention relates to methods for diagnosing and prognosing ovarian tumours in an individual via the detection and measurement of the expression of covarian tumour marker genes (ABA83181-ABA83182, ABA83180, ABA83181, ABA83181-ABA83181-ABA83181-ABA83181-ABA83181-ABA83181-ABA83181-Or SEGMENTS thereof (ABA83183-ABA83189, ABA83189, ABA83181 and ABA83183). The methods of the invention are useful for detecting an ovarian tumour in a patient, for identifying an individual at increased risk for developing ovarian cancer, in prognostic tests for assessing the relative severity of ovarian cancer, in tests for monitoring a patient in remission from ovarian cancer and in tests for monitoring a patient in remission from ovarian cancer. The methods can additionally be used to identify a particular tumour as being an ovarian tumour (i.e., an epithelial ovarian tumour selected from serous cystadenoma, borderline serous tumour, mucinous cystadenoma, borderline serous tumour, mucinous cystadenocarcinoma, endometrioid carcinoma, undifferentiated carcinoma, clear cell adenocarcinoma, cystadenofibroma, adenofibroma and Brenner tumour. The ovarian tumour marker genes of the invention were identified to overexpressed in a broad variety of ovarian epithelial tumour cells contained in mmune response pathways, in the regulation of cell in minume response pathways, in the regulation of cell conjiferation and in protein folding, and many of these are membrane-contained and protein folding, and many of these are membrane-contained and the overexpressed of madition to their uses as diagnosite, and the protein the present and the protein folding to their uses as the protein the protein folding to their uses as a fadagnosite, and the protein the present and the present Ovarian tumour marker gene; human; overexpression; upregulation; epithelial tumour; cancer; diagnosis; prognosis; disease monitoring; identification; serous cystadenoma; borderline serous tumour; serous cystadenoma; borderline mucinous cystadenocarcinoma; mucinous cystadenocarcinoma; mucinous cystadenocarcinoma; mucinous cystadenocarcinoma; endifferentiated carcinoma; clear cell adenocarcinoma; cystadenofibroma; denofibroma; Bernner tumour; serial analysis of gene expression; SAGE; immune response pathway; cell proliferation regulation; protein folding; membrane localised; secreted; therapeutic target; cytostatic; gene therapy; vaccine; ds. Detecting and identifying ovarian tumor, identifying increased risk for developing ovarian cancer, and determining effectiveness of ovarian cancer treatment, by measuring expression level of ovarian tumor marker prognostic markers, the ovarian tumour marker genes or their encoded proteins may be used as therapeutic targets for the treatment and prevention of ovarian cancer. Sequences ABA83081-ABA83122, ABA83180, ABA83182 and ABA83184 represent the ovarian tumour marker genes of the Hough CD; Pizer ES, (USSH ) US DEPT HEALTH & HUMAN SERVICES 23; Page 105-106; 140pp; English. The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (See SEQ ID NO:1 to 4622); (b) the full-inagh coding region of sequence (See SEQ ID NO:1 to 4622); (b) the full-inagh coding region of sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above corporation of moreic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by the full-comprising the above polypeptide; (b) an amino acid sequence encoded by the full-comprising at least 80% identical to (a) or (b); (5) a chimeric polypeptide comprising the above polypeptide fused to a heterologous polypeptide; (6) an isolated antibody that binds to the above polypeptide; (6) a chimeric polypeptide; (6) an isolated antibody that binds to the above polypeptide; (7) a process for producing the antibody; (8) a tumour-associated antigonic target (TAT) a process composition of matter comprising the above polypeptide; (10) a composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of the growth of the call is at least in part dependent upon a growth by the call is at least in part dependent upon a growth of the call is at least in part dependent upon a growth of the call is at least in part dependent upon a growth of the call is at least in part dependent upon a growth of the above protein; (13) a method of containing the growth of the call is at least in part dependent upon a growth of the call is at least in part dependent upon a growth of a protein in a sample suspected of containing the proversing of the captured of a protein in a sample suspected of containing the above protein; (16) a method for treating or a protein disorder associated with increased expresses the above protein; and (17) a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          reventing or treating cancer. The composition is also used for preparing medicament for the therapeutic treatment or diagnostic detection of a sll proliferative disorder or cancer. The present sequence represents a
                                                                                                                          TAT; cytostatic; gene therapy;
                                                                                tumour-associated antigenic target (TAT) cDNA sequence #3836.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     therapy. The composition and methods are useful for diagnosing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TAT cDNA sequence from the present invention.
                                                                                                                        human; tumour-associated antigenic target; cancer; cell proliferative disorder; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; SEQ ID NO 3836; 5504pp; English.

120 100 The present invention relates to an ApoE humanised mammalian cell. The present sequence is the coding sequence for human ApoE3, which was used in the metchod of the present invention. The ApoE humanised mammalian cell can be used for screening for agents useful for treating or preventing Alzheimer's disease and arteriosclerosis 294 174 234 354 9 80 40 1 LysValGluGlnAlaValGluThrGluProGluProGluLeuArgGlnGlnThrGluTrp GlnSerGlyGlnArgTrpGluLeuAlaLeuGlyArgPheTrpAspTyrLeuArgTrpVal CAGAGCGGCCACCGCTGGGAACTGGCACTGGGTCGCTTTTGGGATTACCTGCGCTGGGTG GlnThrLeuSerGluGlnValGlnGluGluLeuLeuSerSerGlnValThrGlnGluLeu CAGACACTGTCTGAGCAGGAGGAGGAGGAGCTGCTCCAGCTCCCAGGTCACCCAGGAACTG GlnAlaArgLeuGlyAlaAspMetGluAspValCysGlyArgLeuValGlnTyrArgGly U; 0 Other; 1156 299 0 0 0 Length:

The invention comprises methods of detecting the presence or absence of at least one allelic variant of a polymorphic region of a gene associated with cardiovascular disease. The invention specifically relates to detecting the region of a cytochrome C oxidase subunit VID (COX6B) gene that is associated with high serum cholesterol, or the region of the Neacetylglucosaminy! transferase component glycosylphosphatidylinositol-1 (GPI-1) gene that is associated with low serum high density lipoprotein (HDL). The methods of the invention are useful for detecting a predisposition to high serum cholesterol, low serum HDL and readiovascular disease. The methods are also useful for elucidating pathological pathways, developing diagnostic assays and new drug theraples for such disorders. The present DNA sequence represents a human cardiovascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           100

The present sequence is a human apolipoprotein E (apoE) isoprotein, apoE3 DNA. The apoE lipoproteins are useful for lowering cholesterol, delaying the onset of atherosclerosis, treating or regressing atherosclerosis without inducing hypertriglyceridaemia, in a mammal lacking an endogenous, normally functioning apoE gene or low density lipoprotein (LDL) receptor or is at risk for developing atherosclerosis due to accumulation of lipoprotein remnants in the bloodstream or having a defect in remnant removal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GluValGlnAlaMetLeuGlyGlnSerThrGluGluLeuArgValArgLeuAlaSerHis 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AGGCGCTGATGGACGAGACCATGAAGGAGTTGAAGGCCTACAAATCGGAACTGGAGGAA 354
                    New apolipoprotein E polypeptide and nucleic acid, useful for lowering cholesterol, delaying the onset of or treating atherosclerosis in mammal, without inducing hypertriglyceridemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 ArgAlaLeuMetAspGluThrMetLysGluLeuLysAlaTyrLysSerGluLeuGluGlu 80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GINLEUThrProValAlaGluGluThrArgAlaArgLeuSerLysGluLeuGlnAlaAla

The invention relates to a mammalian cell receptor, useful in the treatment of cancer, which binds to tumour associated lipids and induces anergy or apoptosis in the T cells and antigen presenting cells (APCs). Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tumour associated lipids and induces cellular inactivation or death is deleted or functionally deactivated, producing (MI) a tumouricidal immunocyte population in vivo in a mammal (by allowing tumour associated lipids to contact immunocytes in which receptors for immunosuppressive fatty acids, ceramides, glycolipids, sphingolipids, glycosphingolipids, phosphosphingolipids, gangilosides, sialylated glycans, lipopeptides and proteoglycolipids are inactivated or deleted), a construct useful in the treatment of cancer comprising a superantigen (SAS) nucleotide inserted into a virus, a mammalian T cell
                                                                            260
                                                                                                                                                  280
                                                                                                                                                                                       954

receptors for the lipids are inactivated or deleted to produce a tumouricidal immunocyte population, and administering the tumouricidally activated immunocytes to the host), producing (M3) a tumouricidally performed immunocytes to the host), producing a tumouricidally activated in which receptors for the tumouricidally activated oppulation, and administering APCs to the host), producing a tumouricidal T cell contact T cells, in which adaptor proteins, which inhibit T cell contact T cells, in which adaptor proteins, which inhibit T cell activation by tumour associated antigens, are deleted or functionally administering the tumouricidal population of T cells, and administering the tumouricidally activated T cells to the host, or allowing a superantigen-lipid raft to contact T cells to the host, treating (M5) cancer in a mammal (by administering a lipid binding molecule which binds immunosuppressive tumour associated lipids in vivo, producing (M5) cancer in a mammal (by administering a lipid binding molecule which binds immunosuppressive tumour associated antigen to contact immunocytes in which adaptor proteins which inhibit T cell activated) and producing (M7) at edleted or functionally deactivated) and producing (M7) at tumouricidal T cell population in vivo in a mammal comprising allowing a superantigen-lipid raft conjugate to contect immunocytes in vivo. The treceptors, methods and compositions are useful for treating cancers and tumouricidal T cell superantigens are co-administered or administered as fusion constructs with anti-tumour proteins or motific. The present the contact immunocytes in vivo. The coeptors, methods and compositions are useful for treating cancers and tumours bacterial superantigens are co-administered or administered as fusion constructs with anti-tumour proteins which in the present contact immunocytes in vivo in the present contact in the present co incorporated into a fusion construct with a superantigen. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from the US patnet office website at "seqdata.uspto.gov/sequence.html?DocID=20020177551"

                                                                                                                                                                                                                                                                                                                                                                           presence or absence of multiple haplotypic genetic variations in a preselected region of one chromosome of a chromosome pair. The method is also useful for determining the linkage phase between two adjacent loci. The method is fast, inexpensive and provides uncomplicated determination of haplotypes in nucleic acid fragments of varying length from 25-40000 base pairs. The present sequence represents the human apolipoprotein E (apoB) coding region nucleotide sequence, which is used in the exemplification of the present invention. Human apoE is located on specification, but the coding sequence of apoE is referred to in Example 3 by Genbank accession number K00396
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AGGGGCGCTGATGGACGAGACCATGAAGAGTTGAAGGCCTACAAATCGGAACTGGAGGAA 354

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method for detecting the presence or absence of multiple haplotypic genetic variations in a preselected region of one chromosome of a chromosome pair comprises selecting nucleotide polymorphisms, suspected to occur in the preselected region, isolating a target nucleic acid (TMA) of the chromosome pair from a sample, and detecting the presence or absence of several polymorphisms, using designed oligonucleotide probes. The method is useful for detecting the

The method is used for increasing lipid efflux and reverse cholesterol transport in ocular tissue, preferably retinal pigment epithelium (RPE) and/or Bruch's membrane, in an individual afflicted with AMD or Stargardts disease (fundus flavimaculatus), and for treating macular degeneration. The present sequence represents a DNA encoding a human apolipoprotein E (GenBank Accession No. K00396)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to increasing lipid efflux from and reverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method (MI) for identifying a nucleic acid by means of fluorescence resonance energy transfer (FRET). MI comprises: (a) providing a first nucleic acid containing the nucleotide to be identified in a single-stranded containing the nucleotide to be identified in a single-stranded of identified and the aequence immediately in 3' to the nucleotide to be complementary to the sequence of the first nucleic acid immediately in 3' to mucleotide to be identified, and a first FRET-generating to the nucleotide to be identified, and a first FRET-generating in a nucleic acid, where the sequence immediately in 3' to the nucleotide for the inverpohere linked to a nucleotide from 1-12 nucleotides far apart from the 3' terminal nucleotide of the second nucleic acid; (c) hybridising the first and second nucleic acid, resulting in a nucleic cod, bybridising the first and second nucleic acid, resulting in a nucleic cod, bybridising the first and second nucleic acid, polymerase and locotide chemically linked to a second FRET-generating couple stranded conformation, of the first nucleic acid polymerase to parform a single base extension at the 3' end of the first nucleic acid, and (f) has extension at the 3' end of the first nucleic acid, and (f) the nucleotide chemically linked to the second FRET-generating fluorophore conclude chemically linked to the second FRET-generating fluorophore conclude chemically linked to the second FRET-generating the nucleic acid polymerases for the same nucleotide when labelled or non-labelled by employing MI; (4) sequencing nucleic acid above, comprising at the present anucleic acid above, comprising at the midelide fluore and kill for the methods described above, comprising a and kits of the present invention are useful for identifying a SMP or mucleic acid by employing MI; (4) sequencing nucleic acid polymerases or the preference of nucleotide flow aparting the extension of properties of nucleotide second FRET-generating fluorophore polymerases or the preference of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a receptor in a mammalian cell that inhibits regular activation by receptors specific for lipid-based tumour associated antigen. The receptor has cytostatic and antimicrobial properties and is suitable for use in gene therapy. The receptors, methods and compositions are useful for treating a neoplastic disease or tumour (cancer), and infectious diseases. This sequence represents apolipoprotein polymuclocide, a cell surface moiety, the DNA of which can be transfected into a cell with superantigen DNA to generate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      40

                                                                                                                                                                                                                                                                           The invention relates to a composition comprising a plurality of CDNAs for detecting the altered expression of genes in an immunological cresponse. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the invention of an immunopathological condition in a sample, conditions to form one or more hybridisation complexes, detecting the conditions to form one or more hybridisation complexes and comparing the levels of the detected to hybridisation complexes with the level of hybridisation complexes with the level of the detected in a non-diseased sample, where an altered level of the detected hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and comparing the expression of target polymucleotide probes. The converse are useful as hybridisable array elements in a microarray for monitoring the expression of target polymucleotides. The microarray for monitoring the expression of target polymucleotides. The microarray for monitoring culcarative colitis, hyperecesinophila, irritable bowel syndrome, culcarative colitis, hyperecesinophila, irritable bowel syndrome, carcinogenicity studies, forensics or pharmacogenomics. The composition carcinogenicity studies, forensics or pharmacogenomics. The composition carcinogenic fragments. This sequence captresents a human cDNA of the invention. Note: The sequence data for this patent did not form part of fram intent promo at secdinar and the leader of the primed specification of the prime of the prime of the primed specification of the prime of the primed specification of the prime of the composition of the prime of

P-PSDB; AEB86466.

Marker for screening for compounds influencing a gene or protein, for treating cartilage disorders, such as, osteoarthritis, comprises a polynucleotide or a complement to specific genes, or an antibody to its protein.

Claim 1; SEQ ID NO 13; 64pp; Japanese.

The invention relates to a novel marker for cartilage disorders. The marker consists of a polymucleotide sequence of 15 bases from the sequence of acetyl-conzyme A acetyltransferase 1, Rev-Erbh-beta, Selenoprotein P, aquaporin 1, BMP-1b; FK506-binding protein 1A, apolipoprotein B, acyl-coA synthetase 5, epoxide hydrolase 1, or consists of lithese gene, and/or a polymucleotide complementary to one of these. The invention further comprises: a detection method of a cartilage disorder; a disease marker for cartilage disease containing an antibody control acid, as given in the specification; a detection method of a cartilage disorder using a protein sample from the subject, or a peptide from it, and the antibody as a label; screening for a material which controls expression of one of the genes above; screening for a material which which controls the activity or function of one of the proteins; and an agent to improve or treat a cartilage disorder which contains a substance controlling expression of the genes or activity of the proteins. The markers may be used as a probe or a primer, for diagnosis of conditions such as esteoarthritis, chordrodystrophy, discopathy, cartilage damage, semilunar cartilage disorder, deficient healing of fractures, or in chondrocyte transplants. The screening methods are useful for identifying therapeutic compounds. This polymuclectie sequence represents the DNA encoding apolipoprotein E of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
